

## **Group C Activity-2 Feedback by Customers**

- The following points represent client comments after our team described the site map and prototypes.
- Customers stated that the papers and events were not the primary focus.
- Their primary focus was on the members or researchers present and their study findings.
- The customer liked our prototypes in which we highlighted member details and briefed them on their introduction and research insights.
- The primary portion, the customers were specific about not adding any research papers in the website because it is handled by CEEA.
- They stated that the website is not for S.T.E.A.M regions, but rather for a larger perspective, and that we can add researchers from various fields, not limited to STEM disciplines.
- The customer requested a device-friendly website that allows for easy search and viewing of content.
- When we discussed Admin roles for the website, they choose minimal maintenance with maximum impact because no Admin member can manage on their own.

More over the customer has advised to just concentrate on the members, membership details, Research insights and the Network Collaboration is the major part that we need to focus on by gathering members of similar Interests. Interaction between people is key.

We have also updated the User Story Map by Updating MVP's that were advised to us in the last week's feedback.

The feedback given by the customers is taken into consideration and will make sure, that these will be implemented in Word Press Designs in which we'll be working.
